

Abstract

The present invention enables one or a plurality of inventors to enter invention disclosures comprising figures and descriptive text along with patent application support documentation required by the United States Patent Office (USPTO) such as transmittal forms, fee sheets, inventor declarations and assignments into a central document for filing as a patent application. An inventor is guided through an application development process by answering a series of questions that enable an inventor to provide an enabling disclosure to the USPTO. The central document is periodically filed with the patent office to form the basis for a patent application pursued by a common assignee. A data entry device is provided in data can be entered single-handedly or by use of a single digit of a hand or foot.
